Both of the plants are known in the traditional medicine for their positive effect on different types of discomfort.

A. glycyphyllos is used for bettering the cardio-vascular system.

R. graveolens is used as a painkiller or mood regulating substance.

Astragalus glycyphyllos L.

Ruta graveolens L.

On the graphics you can see the MNC(maximal nontoxic concentration) for *Astragalus glycyphyllos* (on the right). The extract of the same plant reaches 74.49% of inhibition when used in MNC (see below). The extracts from *R. graveolens* L. shows very high toxicity and has not shown antiviral activity.
